

VISALLO

Make sense of your big data

Visallo is a distributed software platform used to visualize, analyze, and fuse together the big data sources you care about most. Its intuitive web-based interface helps users discover connections and explore relationships within data using a suite of analytic tools, including interactive graph visualizations, full-text document and multi-media search, dynamic data histograms, interactive geographic maps, dynamic timelines, and collaborative workspaces shared in real-time. All of this is done with a fine-grained access control model that keeps your data safe.

What Visallo does for you

Dynamic histograms provide a quick way to understand important attributes of your data.

Adapts to your problem set

The core of Visallo is open sourced under the Apache 2.0 license and designed with extension and customization in mind. You're not stuck with a one-size-fits-all solution with Visallo.

Exposes relationships you never knew about

Graph visualization is at the core of Visallo's user interface. Organize data through a rich set of layout options and find connections within your data that you didn't even know existed.

Visallo is...

Open Source

Insightful

Secure

Collaborative

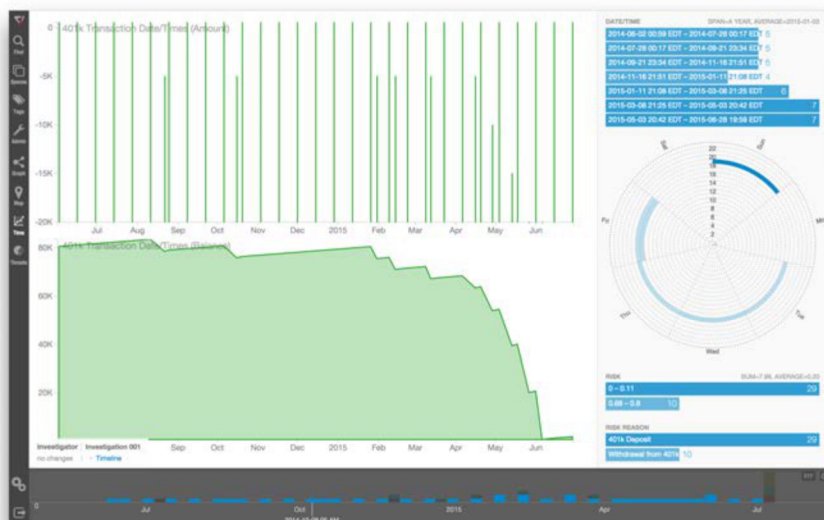

How Visallo helps you find answers

Finds things you never could before

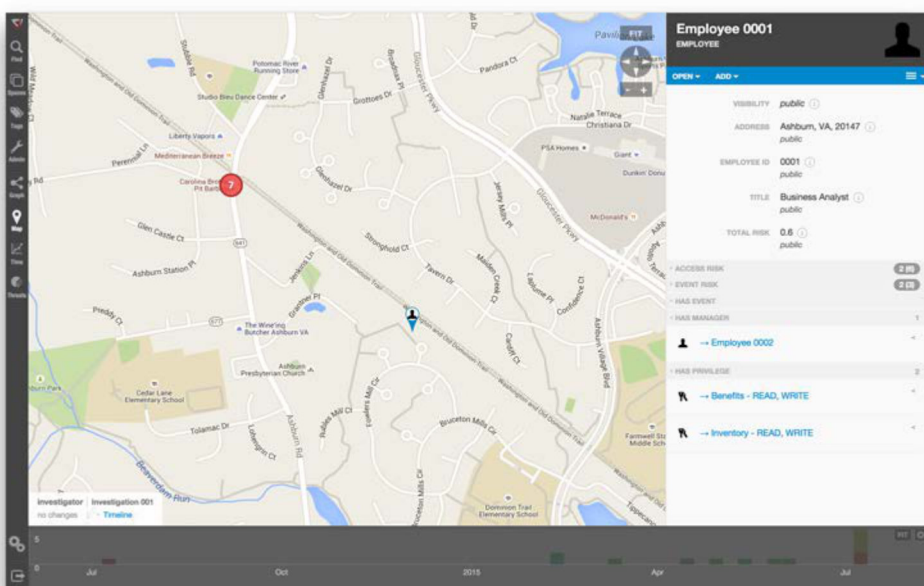

Visallo's unique indexing architecture allows you to find all types of media. Your videos, audio files and images will never get lost again.

Keeps everything secure, really secure

A fine-grained access control model allows you to restrict any data property or relationship individually, ensuring that no one sees something they shouldn't.

Synchronized timelines and flexible charting show how your data changes over time.

Visallo's mapping capabilities expose geospatial insights hidden in your data.

Promotes faster collaborative work

Real-time collaboration is built into the core of Visallo. Shared workspaces between multiple coworkers allow everyone to see updates and changes as they happen.
